* Results for samples collected on Tuesday, October 17, as part of routine monitoring for algal toxins from Skaneateles Lake appear to have an anomalous finding. One result in finished water at the Village of Elbridge UV plant was 0.16 ppb. The finding is inconsistent with all previous finished water samples at this location, and all other finished water locations throughout the last 30 days of testing. This finding is below the EPA's 10 day health advisory level of 0.30 ppb for sensitive populations and well below the adult level of 1.6 ppb.

Values in parts per billion (ppb)
 ND = Non Detect
 "-" = Not Sampled
